The isolation of polynucleotides encoding the imidazoline receptive polypeptides have immunological and ligand binding properties, which enable identification of agents having greater potency and/or more selectivity for these receptors.

                                                                                                                                                                 2151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            amino acid residues. The protein is highly unique in its sequence and may represent the first in a novel family of receptor proteins. The cDNA can be used to produce recombinant IRL, to screen for ligands binding IRL, to raise antibodies against IRI or to probe for other genes encoding homologous IRI proteins.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Sat Apr 22 13:19:37 2000; MasPar time 50.95 Seconds 497.627 Million cell updates/sec

Tabular output not generated.

Title: >US-09-422-999-18 (1-849) from US09422999.pep 6222

Description: Perfect Score: Sequence: 1 MVLWKRALTMTGFLTRRTHL.....VIDNQRTLSQMSHRLEPRRP 849

Scoring table: PAM 150 Gap 11

Searched: 82229 seqs, 29864866 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot38 1:swissprot

Statistics: Mean 55.453; Variance 99.565; scale 0.557

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CELL DIVISION CONTROL PROTEIN 25.
CDC25 OR CTN1 OR YLR310C OR L2142.6.
Saccharomyces cerevisiae (Baker's yeast).
                      This SWI
                                              JONES S., VIGNAIS M.L., BROACH J.R.;
"The CDC25 protein of Saccharomyces cerevisiae promotes exchange of guanine nucleotides bound to ras.";
MO1. Cell Biol. 11:2641-2646(1991).
-!- FUNCTION: PROMOTES THE EXCHANGE OF RAS-BOUND GDP BY GTP. THIS PROTEIN POSITIVELY CONTROLS THE LEVEL OF CELLULAR CAMP AT START, THE STAGE AT WHICH THE YEAST CELL DIVISION CYCLE IS TRIGGERED.
-!- SIMILARITY: CONTAINS 1 RASGEF DOMAIN.
                                                                                                                                                                                                                                                                                                                                                               "Characterization, cloning and sequence analysis of the CDC25 which controls the cyclic AMP level of Saccharomyces cerevisian BO J. 5:375-380(1986).
                                                                                                                                                                                                                                                                                                                                                                                                                                             "The S. cerevisiae CDC25 cyclase pathway."; Cell 48:789-799(1987).

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Sat Apr 22 13:18:40 2000; MasPar time 36.15 Seconds 941.038 Million cell updates/sec

Tabular output not generated.

Title: >US-09-422-999-18 (1-849) from US09422999.pep 6222

Description: Perfect Score:

Sequence: 1 MVLWKRALTMTGFLTRRTHL.....VIDNQRTLSQMSHRLEPRRP 849

Scoring table: PAM 150 Gap 11

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir62 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 53.983; Variance 117.292; scale 0.460

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Gene (1992) 117:67-72
Identification and analysis of a DNA fragment from
Saccharomyces kluyveri that can complement the loss
CDC25 function in Saccharomyces cerevisiae.
                                                                                                                                                                                                                                                                                                                                                                   PC1114
